Appln No. 10/736,137 Amendment dated August 6, 2009 Reply to Office Action of May 6, 2009

Reply to Office Action of May 6, 2009 Docket No. BOC9-2003-0093 (464)

Listing of Claims:

This listing of claims will replace all prior versions and listings of claims in the

instant application:

1. (Previously Presented) A method of roaming between mobile and wireless

networks comprising:

detecting a wireless network in proximity to a mobile device:

querying the wireless network for an Internet Protocol address for the mobile

device;

receiving the Internet Protocol address; and

sending a message via a mobile network for the mobile device to a mobile

switching center of the mobile network using a mobile network control channel, wherein

the message instructs the mobile switching center to route voice data intended for the

mobile device to the Internet Protocol address via a communicatively linked gateway and

the wireless network.

2. (Original) The method of claim 1, further comprising receiving voice data from

the gateway via the wireless network.

3. (Original) The method of claim 1, further comprising configuring the mobile

switching center to route voice data intended for the mobile device to the Internet

Protocol address via the communicatively linked gateway and the wireless network.

4. (Original) The method of claim 1, wherein prior to said detecting step, the mobile

device is in communication with a different wireless network.

2

Appln No. 10/736,137 Amendment dated August 6, 2009

Reply to Office Action of May 6, 2009 Docket No. BOC9-2003-0093 (464)

5. (Previously Presented) A method of roaming between mobile and wireless

networks comprising:

communicating over a wireless network using a mobile device;

detecting that the mobile device is roaming outside a coverage area of the wireless

network; and

sending a message via a mobile network for the mobile device to a mobile

switching center of the mobile network using a mobile network control channel, wherein

the message instructs the mobile switching center to route voice data intended for the

mobile device to the mobile device using at least one mobile voice channel of the mobile

network.

6. (Original) The method of claim 5, further comprising receiving voice data from

the mobile switching center via the mobile network.

7. (Original) The method of claim 5, further comprising configuring the mobile

switching center to route voice data for the mobile device to the mobile device via the at

least one mobile voice channel.

8-21. (Cancelled).

22. (Previously Presented) A system for roaming between mobile and wireless

networks comprising:

means for detecting a wireless network in proximity to a mobile device;

means for querying the wireless network for an Internet Protocol address for the

mobile device;

means for receiving the Internet Protocol address; and

Docket No. BOC9-2003-0093 (464)

means for sending a message via a mobile network for the mobile device to a

mobile switching center of the mobile network using a mobile network control channel.

wherein the message instructs the mobile switching center to route voice data intended

for the mobile device to the Internet Protocol address via a communicatively linked

gateway and the wireless network.

23. (Previously Presented) The system of claim 22, further comprising means for

receiving voice data from the gateway via the wireless network.

24. (Previously Presented) The system of claim 22, further comprising means for

configuring the mobile switching center to route voice data intended for the mobile

device to the Internet Protocol address via the communicatively linked gateway and the

wireless network.

25. (Previously Presented) The system of claim 22, wherein prior to operation of said

means for detecting, the mobile device is in communication with a different wireless

network.

26.

(Previously Presented) A system for roaming between mobile and wireless

networks comprising:

means for communicating with a mobile device over a wireless network;

means for detecting that the mobile device is roaming outside a coverage area of

the wireless network; and

means for sending a message via a mobile network for the mobile device to a

mobile switching center of the mobile network using a mobile network control channel.

wherein the message instructs the mobile switching center to route voice data intended

Appln No. 10/736,137 Amendment dated August 6, 2009 Reply to Office Action of May 6, 2009 Docket No. BOC9-2003-0093 (464)

for the mobile device to the mobile device using at least one mobile voice channel of the

- 27. (Previously Presented) The system of claim 26, further comprising means for receiving voice data from the mobile switching center via the mobile network.
- 28. (Previously Presented) The system of claim 26, further comprising means for configuring the mobile switching center to route voice data intended for the mobile device to the mobile device via the at least one mobile voice channel.
- 29. (Previously Presented) A machine readable storage, having stored thereon a computer program having a plurality of code sections executable by a machine for causing the machine to perform the steps of:

detecting a wireless network in proximity to a mobile device;

querying the wireless network for an Internet Protocol address for the mobile device:

receiving the Internet Protocol address; and

sending a message via a mobile network for the mobile device to a mobile switching center of the mobile network using a mobile network control channel, wherein the message instructs the mobile switching center to route voice data intended for the mobile device to the Internet Protocol address via a communicatively linked gateway and the wireless network.

 (Previously Presented) The machine readable storage of claim 29, further comprising receiving voice data from the gateway via the wireless network. Appln No. 10/736,137 Amendment dated August 6, 2009 Reply to Office Action of May 6, 2009

Docket No. BOC9-2003-0093 (464)

31. (Previously Presented) The machine readable storage of claim 29, further

comprising configuring the mobile switching center to route voice data intended for the

mobile device to the Internet Protocol address via the communicatively linked gateway

and the wireless network.

32. (Previously Presented) The machine readable storage of claim 29, wherein prior to

said detecting step, the mobile device is in communication with a different wireless

network.

33. (Previously Presented) A machine readable storage, having stored thereon a

computer program having a plurality of code sections executable by a machine for

causing the machine to perform the steps of:

communicating over a wireless network using a mobile device:

detecting that the mobile device is roaming outside a coverage area of the wireless

network; and

sending a message via a mobile network for the mobile device to a mobile

switching center of the mobile network using a mobile network control channel, wherein

the message instructs the mobile switching center to route voice data intended for the

mobile device to the mobile device using at least one mobile voice channel of the mobile

network.

34. (Previously Presented) The machine readable storage of claim 33, further

comprising receiving voice data from the mobile switching center via the mobile

network.
